

**New release
2025.4**

Add a modern tile with an embedded chart to your dashboards

After the Trend Tile and the Progress Tile, the tile family is growing with a brand new component: the Chart Tile.

Add a chart inside a modern-designed tile to take your dashboards even further.

The tile can also be used without a chart.

Configure N4V components even faster and more easily

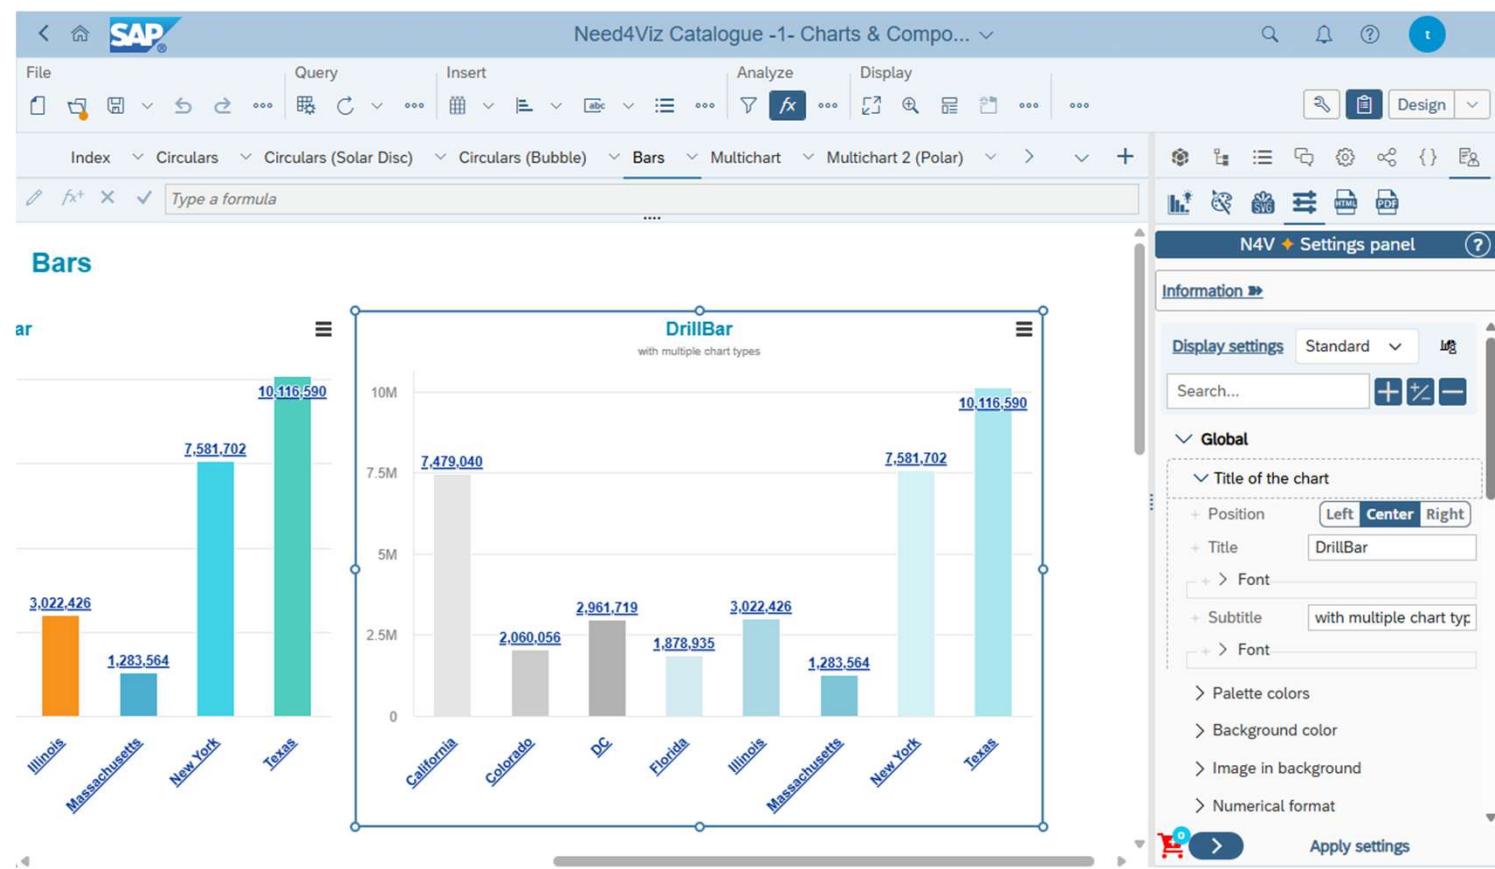

The **Settings Panel** is now available in the **N4V Panel**. This panel allows you to choose between three display modes:

Basic: Only the most frequently used settings are displayed

Standard: Go further in customizing your components

Advanced: Display all available settings ("Advanced settings")

Smart display, a search bar, and more complete this panel, which also allows you to apply settings to multiple components at once, in a single click.

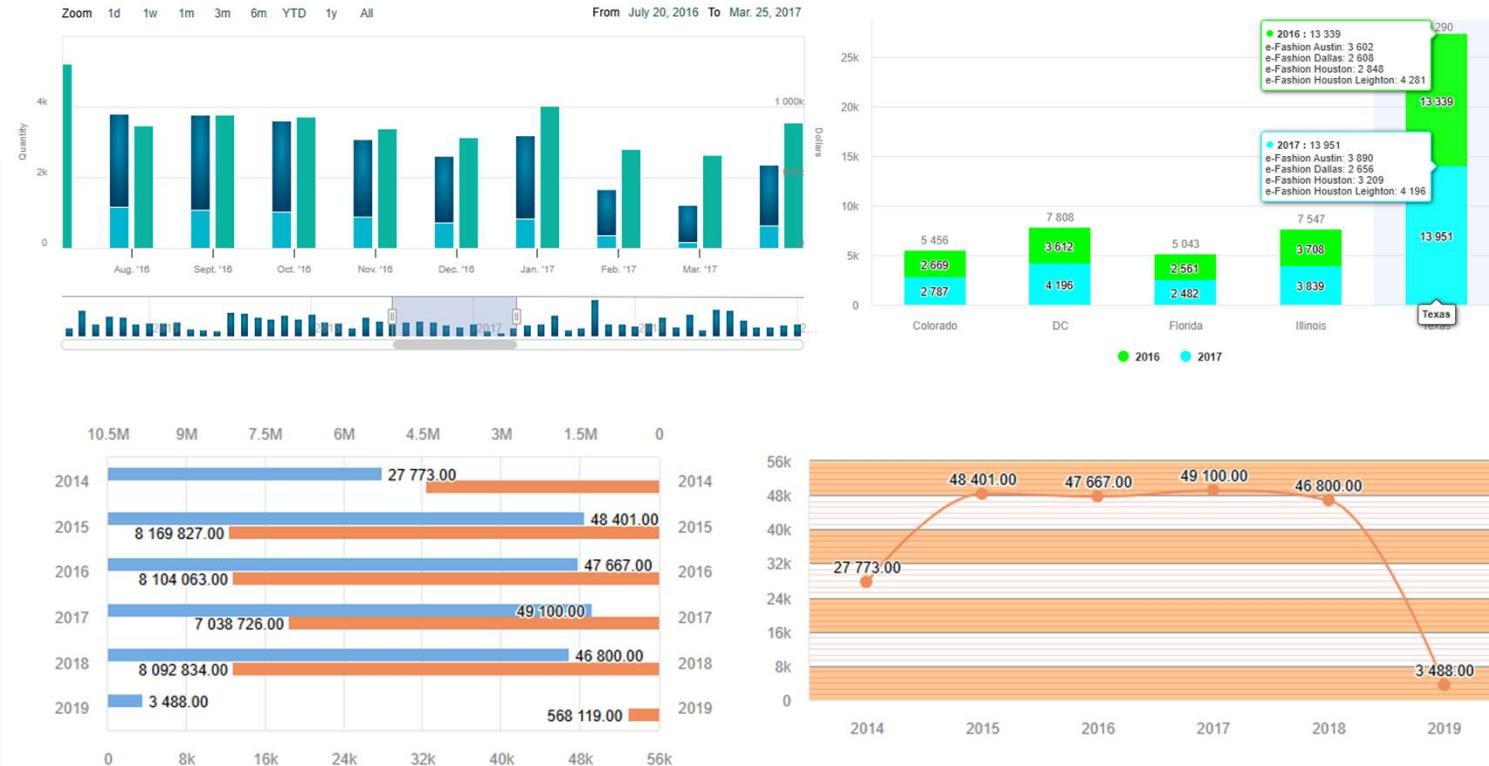

N4VUPDATE ➔ Widget Enhancements

New upgrades for more power

New features are now available in several widgets, including:

- Data stacking is now available in **Multi Drill** and **Timeline**.
- Axes in **Multi Chart** and **Multi Drill** can be further customized (logarithmic scale, inversion, mirroring, alternating colors, gridlines, etc.).
- Dimension value colors can now be provided as inputs in **Multi Drill** and **Pie in Pie**.

Even more display options

The **Pivot Table** now allows you to display tables with horizontal bar values.

Bar tables (vertical / horizontal) can be even further customized (enhanced calculations, visual rendering, tooltips, etc.).

A **variance calculation** column can now be added.

Many **new options** and **improvements** have been added to existing renderings.

Full Release Note
2025.4

Current release of Need4Viz solution

Current release of N4V FOR WEBI

You can see here the features and fixes of the current release. **Change** item indicates that a different behaviour can be observed in your widgets between previous version of N4V FOR WEBI and this version. You may use new settings to update your widget if desired.

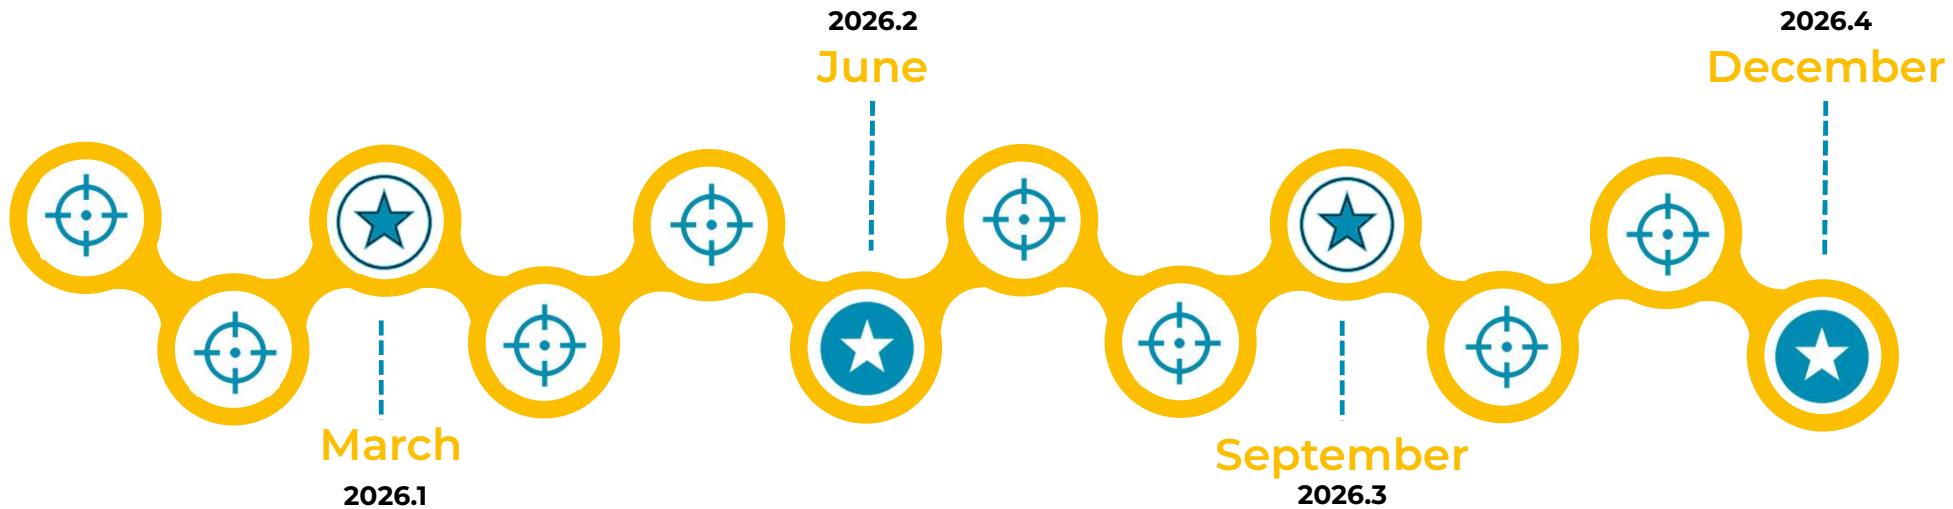

2025.4.3

Release date : 12/01/2025

Technical and functional evolutions of the solution. Main update :

- N4V Panel**
 - SVG & Palettes → The SVG/Palette selected can now be applied directly to the N4V widget (can also be applied on a multi N4V widgets selection)
 - Palette → The palette used in the N4V selected widget is now displayed in the list of palettes of the N4V Panel
 - Palette → The palette created/updated in the N4V Panel popup can now be saved (locally & in our cloud) and is shared in any SAPBI environment / user of your company
 - Palette → The palette created/updated in the N4V Panel popup can now be applied directly from the popup to the N4V widget
 - Palette → The list of all available palettes (palettes saved by user, palettes available for the entire company users, N4V library palettes) in the N4V Panel popup can be fold/unfold
 - Settings → A new panel allows you to configure the N4V elements in 3 distinct modes. A smart fold/unfold, a search bar and a breadcrumb and a button to enable/disable the interactions in the N4V widget are also available in this panel. The modes you can choose are the following ones :
 - Basic : only the main basic settings are shown
 - Standard : go further in the configuration of your widget
 - Advanced : show you all the settings available for the widget (equivalent of the classical "Extended parameters" view)
- New Widget**
 - Chart tile : A new tile is now available in the Tiles family. In this tile, you can draw a chart, show a measure and an optional variation in a modern rendering.
- Global**
 - Fix : In some charts, the quote " character in title/subtitle may not be displayed correctly
 - Enhancement : In most of all N4V Widget, you can now use colors with an opacity in the charts
 - Enhancement : New simplified and harmonized icons are now available for all the N4V widgets
 - Add : An internal proxy can now be used in the printing process of N4V elements to reduce the time of the process (can be useful in some special architectures)
- Fixed Placement Column**
 - Add : All the columns can now be overlaid (instead of splitting columns side by side)
 - Add : Overlaid labels can be smartly adjusted (by default, overlaid labels are not displayed)
- Drillbar**
 - Fix : Display of negative/positive fixed color may not work properly in drilldown
 - Fix : Autodrill may not work properly
 - Add : Multicolor bars in the sublevels is now available

N4V → 2 major versions in 2026

Minor version (every 3 months): corrections, improvements, developments

Major release (every 6 months): new components.

HotFix (as required): urgent corrections and improvements to existing components.
